

Agronomics

PRR Tolerance/
Resistance

Rps1c

- High yielding early Group III
- Moderate resistance to races 3 and 14 SCN
- Rps1c gene for PRR plus good field tolerance

Plant Traits

Plant Height	Medium
Plant Type	Medium Bush
Cyst Nematode	MR3,MR14
Hilum Color	Imperfect Black
Flower Color	Purple
Pubescence Color	Gray

Disease and Resistance Ratings

Seed Piracy

Seeds containing the Roundup Ready® trait and the Genuity™ Roundup Ready 2 Yield® trait are protected under numerous United States patents, including Patent No. RE39,247. It is unlawful to save Roundup Ready® Soybeans or Genuity™ Roundup Ready 2 Yield® Soybeans for planting or transfer to others for use as a planting seed.

Benefits of New Seed

Economics of New Seed vs. Bin-Run

- Bin-run planting rates are generally 15% higher than new certified seed
- Average loss of approximately 10-15% cleanout at harvest for bin-run seed

Convenience

- High quality and high yield potential product vs. bin-run
- Reliable seed supply in many maturities

Limited Warranty Benefits

- Dealer agronomic support before and after the sale
- Risk management benefits of Roundup Rewards® (over \$600 million paid in benefits)

New Innovations

- Monsanto's 100% commitment to agriculture
- Our very preliminary estimate is that farmers get a \$6 benefit for each \$1 spent on private sector research.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate.
